Planning to attend Reunion Weekend in May? Interested in participating in a delightful week of academics, sociability and late spring weather in Vermont? Then come and spend the week of June 2-6 at Bread Loaf for the Spring Alumni College, and take part in either one of our most popular seminars: watercolor painting and computers. Bring a classmate, spouse or friend to Middlebury for the Spring Alumni College. You'll be sure to enjoy the experience!

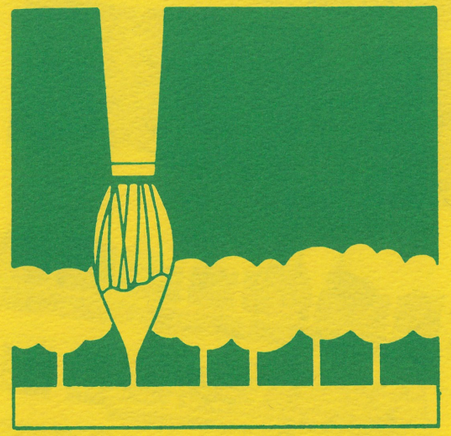
COMPUTER AND WATERCOLOR COURSES

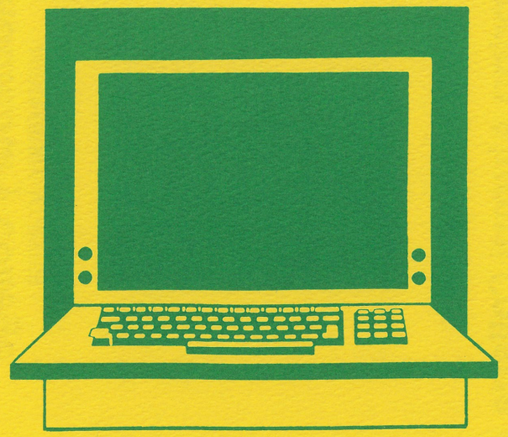


Watercolor: Painting from the Landscape

JAMES BUTLER

Professor Butler's watercolor course has been a regular feature during the Labor Day Alumni Colleges, and we are delighted to offer it in June. In this workshop in watercolor painting, the natural beauty of the Bread Loaf campus will be the subject matter and you will be the interpreter. The classes will include work in composition, drawing, design and color with instruction through painting demonstrations, individual critiques and two slide lectures. No experience is necessary. If the weather doesn't cooperate, the classes will be held indoors and deal with still-life interior situations. Limit: 20 participants -no repeaters please.

James Butler, assistant professor of art, has been an Associate Instructor at Indiana University, and an Artist in Residence for St. Pauls, N.C., School System in a program funded by the National Endowment for the Arts and the North Carolina Arts Council. Professor Butler received his B.F.A. from the Rhode Island School of Design and his M.F.A. from Indiana University. He lived and painted for a year in Rome and has had exhibitions in Indiana, Rome, Rhode Island, Middlebury's Johnson Art Gallery, the P.S. 122 Gallery and the Tibor De Nagy Gallery in New York City. He will be having his second one-man exhibition in New York at the Tibor De Nagy Gallery this fall.



Computer Seminar

MICHAEL OLINICK & ROBERT MARTIN

After the success of last year's computer course, Professors Martin and Olinick are looking forward to seeing another class of students gaining an appreciation of what a computer can and cannot do. As they assist you in furthering your computer literacy, they hope to conquer any lingering fear of computers you may have.

During the seminar, the participants will have access to both a variety of personal computers and the College's mainframe academic computer, a powerful Digital minicomputer called a VAX 11/785. The students will hear lectures about and get hands-on experience with word processing, integrated software and spreadsheets (with Lotus 1-2-3), computer hardware, operating systems, BASIC programming, computer graphics, and data base management.

There will also be lectures and discussions on such topics as computer abuse, computer crime, privacy and security, the future of computers, artificial intelligence and simulation.

The program will be directed toward those with minimal or even nonexistent prior computer experience, but will be flexible enough to accommodate a broad range of computing expertise. For the first full day of the seminar this year, we will run a parallel session for those who feel they have sufficient computer experience to dive directly into some intermediate level activities. Please indicate on the registration form if you are interested in joining this parallel session.

Free time will be worked into the schedule to use as you wish, either for extra work on a computer or some of the more traditional diversions of late spring in Vermont —sports, sightseeing, shopping, etc.

MICHAEL OLINICK, professor of mathematics and computer science, holds a B.A. degree from the University of Michigan and M.A. and Ph.D. degrees from the University of Wisconsin. Before joining the Middlebury faculty in 1970, Professor Olinick taught at the University College in Nairobi, the University of East Africa, the University of Wisconsin, and the University of California at Berkeley, San Diego State University and Wesleyan University. He has held a National Science Foundation grant, has been on leave to do research in topology and mathematical modeling and is the author of a mathematics text and several articles and reviews for professional journals. During the years 1985-87, Mr. Olinick is serving as Middlebury's first Alfred P. Sloan Resource Professor.

ROBERT MARTIN, associate professor of mathematics and computer science, holds B.S. and M.S. degrees from Central Connecticut State College and M.A. and Ph.D. degrees from the University of Maryland. Before joining the Middlebury faculty in 1976 he taught at Northwestern Connecticut Community College and the University of Pennsylvania. Mr. Martin has won three National Science Foundation summer grants. He has published several research articles in professional journals and is coauthor with Mr. Olinick of three books on computer programming. Mr. Martin spent the 1984-85 academic year at the Massachusetts Institute of Technology and Harvard studying advanced topics in computer science.

Spring Alumni College
JUNE 2-6, 1986

The cost, covering four nights of lodging at Bread Loaf, 11 meals and tuition is $275/person or $500/couple. The cost for younger alumni ('70-'85) is $225/person or $400/couple.

Computer classes will be held on the main campus; watercolor sessions at Bread Loaf. Meals will be held at Bread Loaf and the main campus.

If you wish to attend the Spring Alumni College June 2-6, please complete the reservation form below and return it with full payment by May 15 to:

The Alumni College
Middlebury College
P.O. Box 500
Middlebury VT 05753

I/We will attend the Spring Alumni College.

Enclosed is payment in the amount of: $ _____
